

Urinalysis with Medipee: Automatic & Digital.

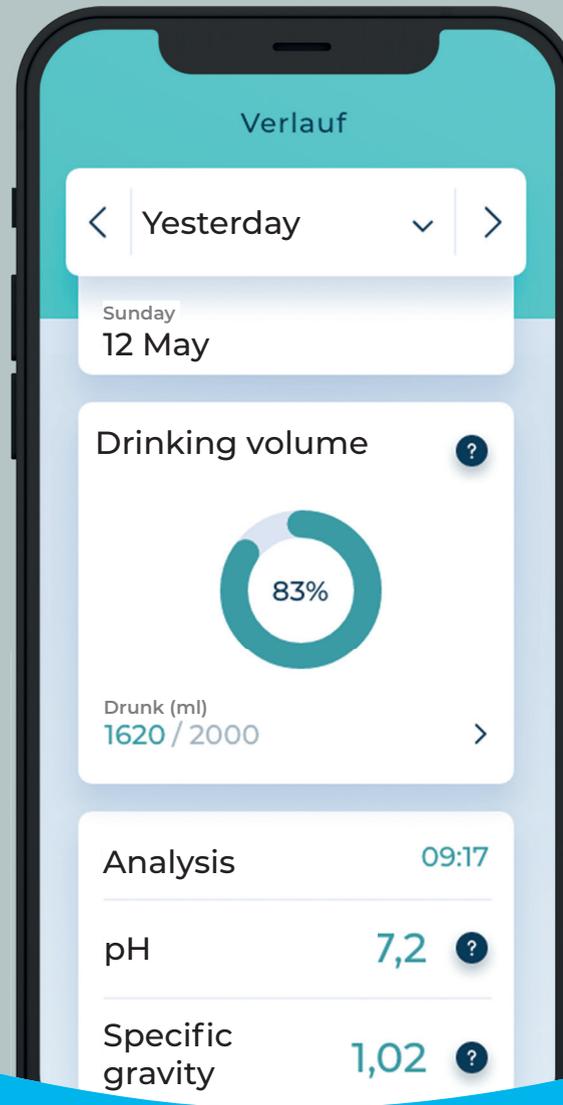

Medipee is a product for both private and professional customers. The app can be used for prophylaxis but also for therapy control. The use of our analyzer, coupled with cartridges that can be used individually according to customer needs, offers a very large application potential.

And it's as simple as this:

1. activate device via app
2. use the WC as normal
3. device starts sampling
4. sample is evaluated via app
5. data is available digitally
6. platelet is wiped off and rinsed off

We bring digitality to a place
that is not yet digital!

We are revolutionizing urinalysis.
Digital. Simple. Contactless.

Yesterday Urine Stix, today Medipee.

Urinalysis: In the future automatically before or after daily tooth brushing!

Human urine contains a vast amount of health-related information that has hardly been used to date. Yet urine reveals so much about the state of health!

“Our vision is that our health care and urine monitoring device will be used in every household worldwide. We want people to benefit from the possibilities of digitalization and keep an eye on their health with the help of our platform technology!” – Thomas Prokopp, Co-Founder of Medipee

Urine is not a flush-away product for us. Urinalysis has always been one of the basic diagnostic tools in medicine. Humans excrete non-usable and toxic metabolic products through their urine, which in turn allows conclusions to be drawn about their state of health.

„Everyone measures what comes in at the top, but no one measures what comes out at the bottom!“

More than 2 billion urine tests per year are often faulty, time-consuming and, above all, unpleasant to take samples of. For the previous measurement, test persons usually have to urinate in a cup in a cumbersome way. Afterwards, the sample is further processed via many manual intermediate steps. Medipee solves this problem by analyzing the urine directly at the point of delivery.

The Founders: Frank Willems (Managing Director), Paul Bandi (Technical Manager) and Thomas Prokopp (Commercial Manager) lead the eleven-strong team.

The Medipee system at a glance

The core of our system is an apple-sized, innovative analysis device that is attached directly to the toilet bowl. Our platform technology is completed by our app for all common smartphones.
